

Using Turck Service Tool To Set IP Addresses

4-27-2020

Configuring FEN20 IP ADDRESS

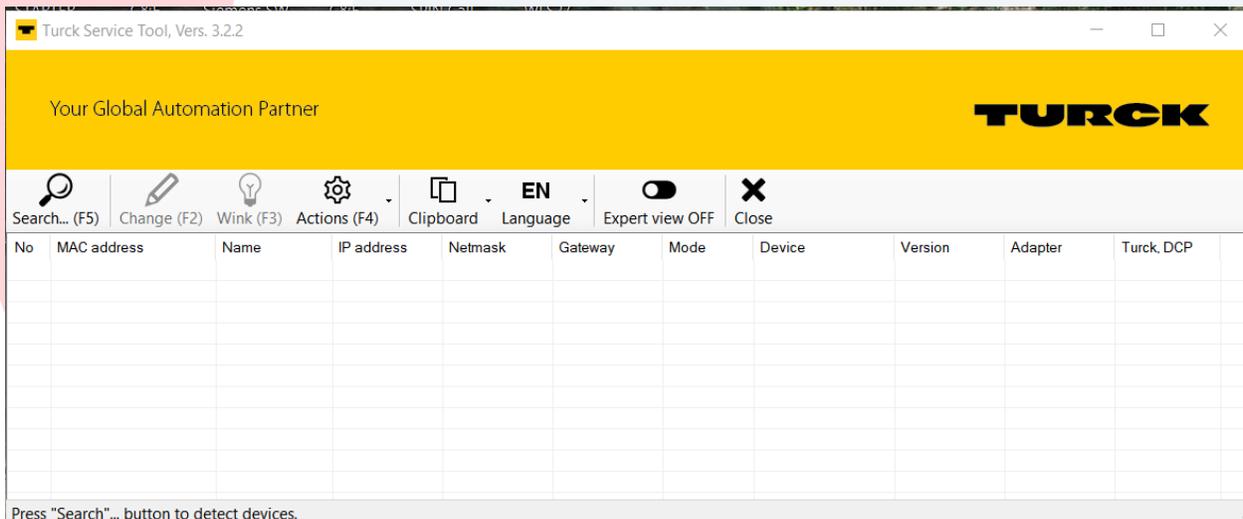

First, we will configure the IP address of the FEN20 we will use the Truck Service Tool.

It can be downloaded using the following link:

https://pdb2.turck.de/repo/media/us/Anlagen/SW_Turck_Service_Tool.zip

Launch the tool to begin the assignment.

Here are the usable functions in the software.

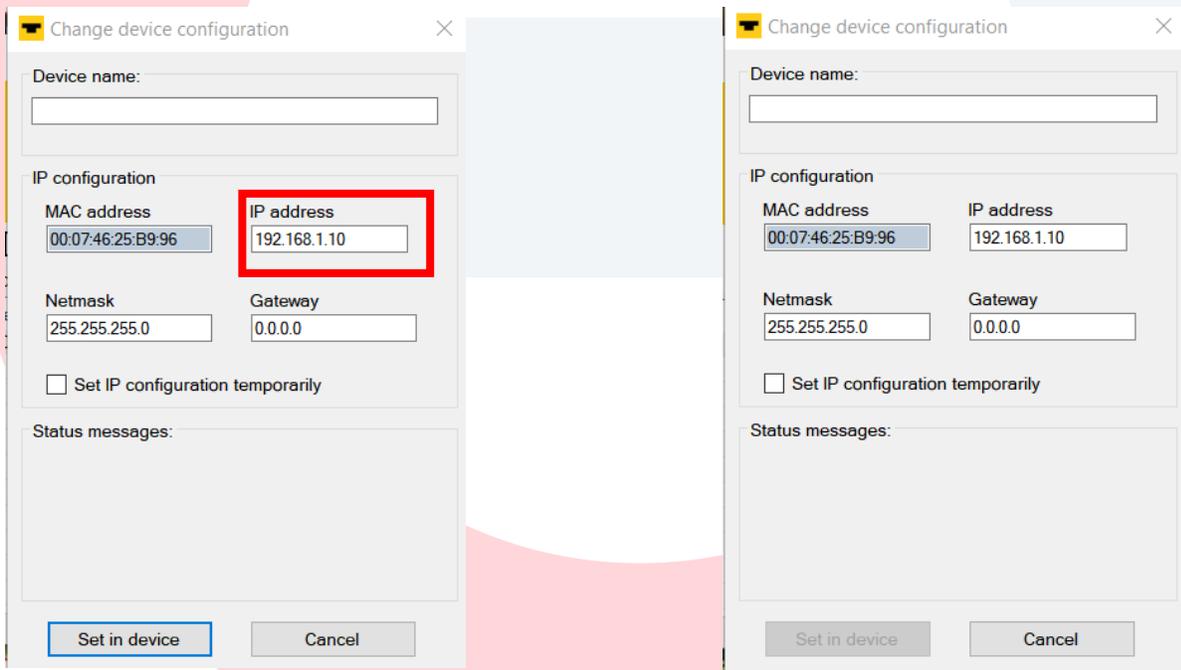

The first step is to use the Search (F5) function to search all connected devices on the network.

No	MAC address	Name	IP ad...	Netm...	Gatew...	Mode	Device	Version	Adapter	Turck, DCP
1	00:07:46:25:B9:96		0.0.0.0	0.0.0.0	0.0.0.0	PGM_DHCP	FEN20-4DIP-4DXP	3.3.6.0	192.168.1.254	DCP, Turck

The Service Tool will list all devices it finds on the network. Notice there is only this FEN20 and the computer on this network. If you have multiple devices on the network, you can also use the Wink (F3) function to flash a light on the device to ensure the correct device is selected.

The next step is to select the FEN20 device (Left Click) to highlight it blue, then use the Change (F2) function to change the IP Address. Here type in 192.168.1.10 in the IP Address field and then select Set in Device.

Now you will see the IP Address of the FEN20 as assigned.

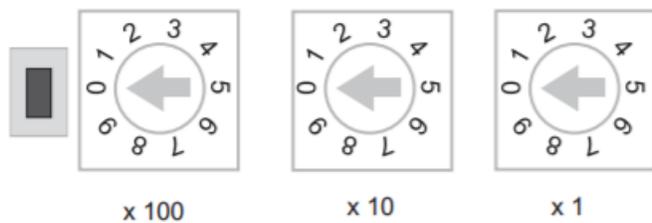

No	MAC address	Name	IP address	Netm...	Gatew...	Mode	Device	Version	Adapter	Turck, DCP
1	00:07:46:25:B9:96		192.168.1.10	255.25...	0.0.0.0	PGM_DHCP	FEN20-4DIP-4DXP	3.3.6.0	192.168.1.254	DCP, Turck

From Here you can also double click on the IP Address and open the Web Page of the FEN20.

Configuring TBEN AND BLCEN IP ADDRESS

For Most of the other Turck IO Blocks including TBEN and BLCEN there are three rotary switches the define the address mode.

000: 192.168.1.254

1 - 254: static rotary

300: BootP

400: DHCP

500: PGM

600: PGM-DHCP

900: F_Reset

For a static IP to be assigned to the module the preferred mode is 600. This allows us to assign the module its IP address using the Service Tool or other DHCP Server, and the Module Stores this assigned IP Address and does not send any DHCP requests on subsequent power up cycles.

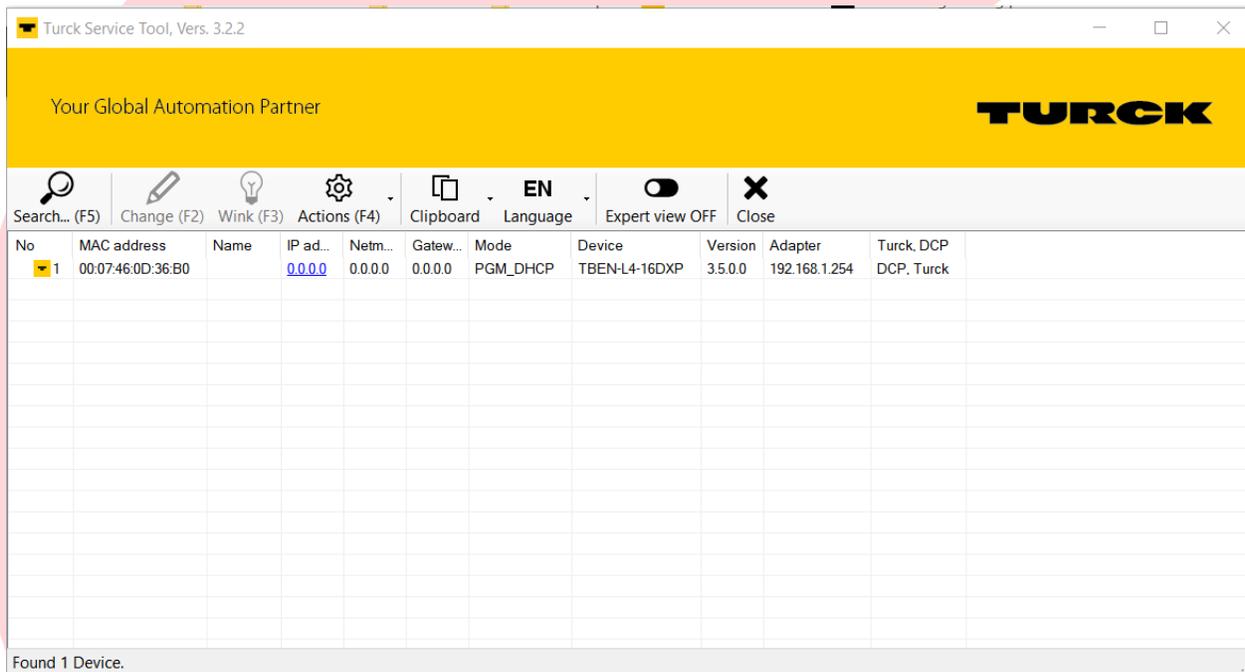

Reference the TBEN-L Compact I/O Modules for Ethernet

Operating Instructions starting on page 18 - found at this link:

https://pdb2.turck.de/repo/media/_us/Anlagen/100000300.pdf

After the switches are set to 600 the device follows the same setup as we saw with the FEN20

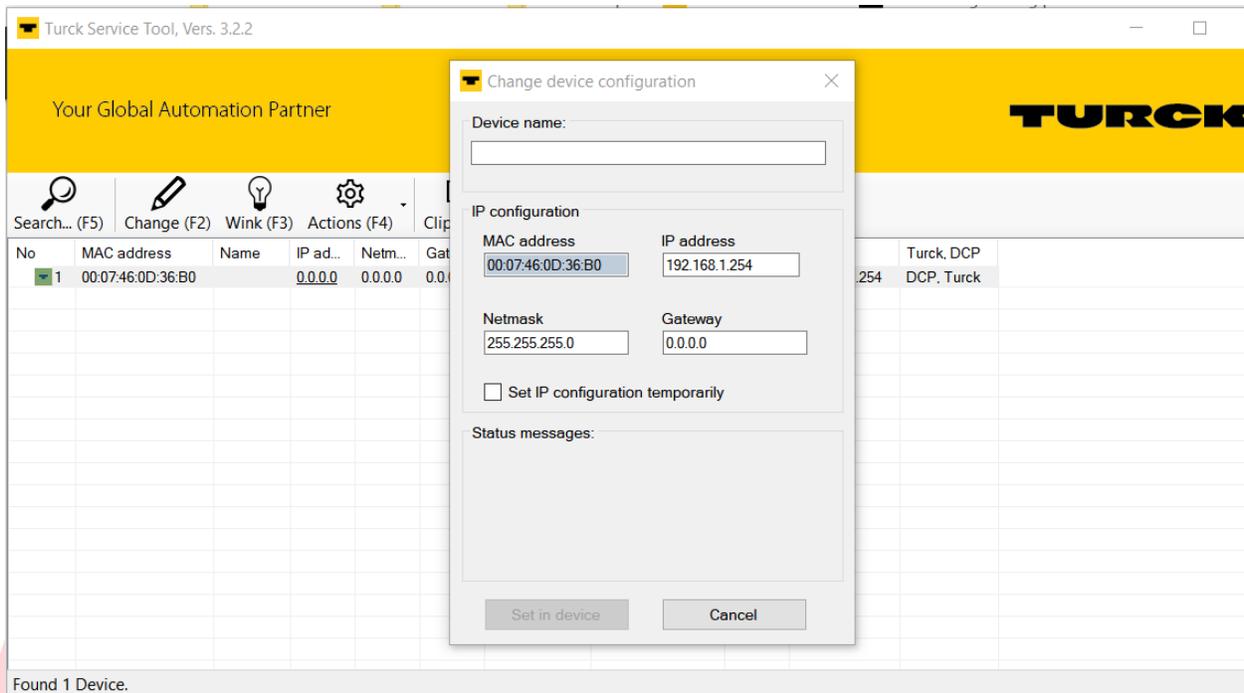

First Search the network for the devices

The screenshot shows the Turck Service Tool interface. At the top, it says "Your Global Automation Partner" and the TURCK logo. Below that is a toolbar with icons for Search, Change, Wink, Actions, Clipboard, Language, Expert view, and Close. The main area is a table with the following columns: No, MAC address, Name, IP ad..., Netm..., Gatew..., Mode, Device, Version, Adapter, and Turck.DCP. The first row contains the following data: No: 1, MAC address: 00:07:46:0D:36:B0, Name: (empty), IP ad...: 0.0.0.0, Netm...: 0.0.0.0, Gatew...: 0.0.0.0, Mode: PGM_DHCP, Device: TBEN-L4-16DXP, Version: 3.5.0.0, Adapter: 192.168.1.254, Turck.DCP: DCP, Turck. Below the table, it says "Found 1 Device."

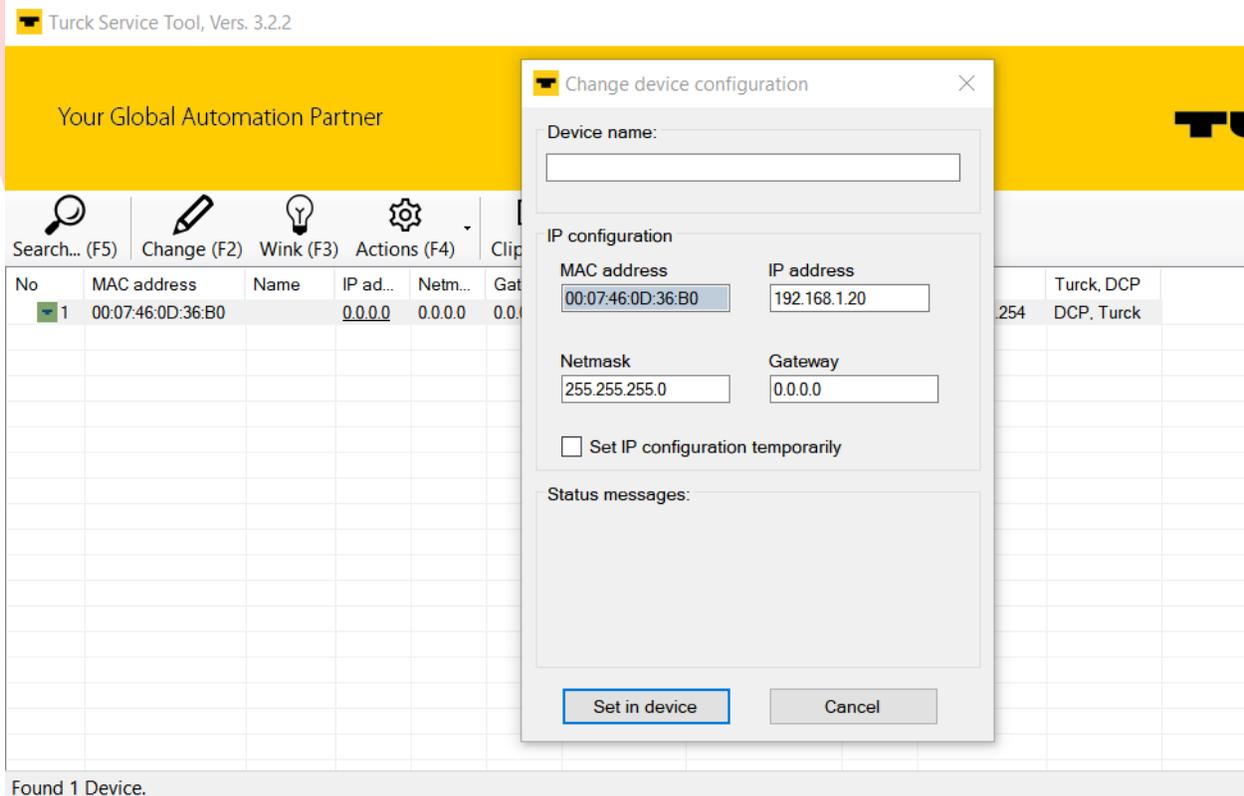

No	MAC address	Name	IP ad...	Netm...	Gatew...	Mode	Device	Version	Adapter	Turck.DCP
1	00:07:46:0D:36:B0		0.0.0.0	0.0.0.0	0.0.0.0	PGM_DHCP	TBEN-L4-16DXP	3.5.0.0	192.168.1.254	DCP, Turck

Left Click on the line to select the device

Note the IP Address populates with the Computer's IP Address. You must change the fourth octet to remain on the same subnet as the computer.

After typing in the new IP select Set in device.

Then you will see the device with the newly assigned IP Address

Turck Service Tool, Vers. 3.2.2

Your Global Automation Partner **TURCK**

Search... (F5) | Change (F2) | Wink (F3) | Actions (F4) | Clipboard | Language: EN | Expert view OFF | Close

No	MAC address	Name	IP address	Netm...	Gatew...	Mode	Device	Version	Adapter	Turck.DCP
1	00:07:46:0D:36:B0		192.168.1.20	255.25...	0.0.0.0	PGM_DHCP	TBEN-L4-16DXP	3.5.0.0	192.168.1.254	DCP, Turck
